AXIOM Systems, Inc. announces general release of HIPAA 5010 Testing Solutions (Frederick, MD). AXIOM Systems, Inc. (AXIOM) considered the “*Healthcare IT Industry Experts*” today announced the general release of products and services that assist organizations in the testing of HIPAA 5010.

The HIPAA 5010 initiative requires extensive testing of internal processes and external trading partner capabilities due to the large number of format changes; it imposes a larger challenge, to test the business impacts inherent in the 5010 regulation changes.

To address this unique need AXIOM has released the following solutions:

**4010 to 5010 Data Converter Utility** – This converter utility provides the ability to convert current production 4010 input files to a 5010 “state” in order to gain a significant head start to an organizations internal testing requirements.

**TransSend Testing Module** - This application accepts all inbound and outbound HIPAA X12 transaction files and allows users to create and modify HIPAA 5010 transactions using intuitive browser based screens to support the creation of test cases and to manage their status from end to end. The application can be deployed as a hosted service or installed locally.

**5010 Packaged Test Scenarios** - AXIOM’s Healthcare Subject Matter Experts have created a pre-packaged set of test scenarios and test case variations for each of the HIPAA transaction sets affected by 5010. These test cases are intended to test those business areas impacted by the 5010 regulatory changes.

**Test Planning and Execution Services** – These services leverage AXIOM’s deep domain and skill set within the Healthcare industry and provides an organization both the process and expertise required to successfully test the requirements related to the 5010 mandates. AXIOM’s test methodology provides clients with a consistent and organized approach to both internal and external trading partner testing.

**Trading Partner Management Services**, utilizes AXIOM’s Trading Partner Implementation Methodology to address the specific needs of external Trading Partner testing which is critical in the implementation of HIPAA 5010.

“Our HIPAA 5010 Testing Solutions are intended to provide an organization with the deep industry skill set and domain required to achieve a successful HIPAA 5010 compliance strategy while providing tools and products which insure a structured approach in dealing with the requirements of testing related to 5010”, noted Richard Howe, CEO of AXIOM.

AXIOM considered the “Healthcare IT Industry Experts” is a privately held information technology firm, based in Frederick MD, which specializes in delivering an array of healthcare IT services and products. Its services are driven by the firm’s extensive knowledge of the “business of healthcare” and detailed understanding of the regulatory and technology issues that drive initiatives. This hands on experience and industry exposure has provided the AXIOM team with the knowledge of best practices in the industry required to deliver high quality service. From initial planning through solution implementation, AXIOM offers unparalleled expertise to assist Clients in making the right decisions.
